

Technical design

1.What's WordPress?

WordPress is often perceived as a simple blogging application. WordPress has grown into a full fledged Content Management System (CMS) that powers millions of website all over the world. The New York Times, Ebay Inc, Sony Music, Bata, LinkedIn, Flickr, Usain Bolt, are some of the WordPress users.

If the platform wasn't reliable, it wouldn't be so widely used. Big-name sites like TED, TechCrunch, UPS, and CNN all use WordPress.

Each month roughly 70 million new posts are published on WordPress. Those posts generate about 77 million new comments over the same period of time.

Considering the fact that WordPress is used by about one-third of websites across the globe, it's safe to say that your site will be in good hands if you use it as well.

2. Great support

Since WordPress is used by so many people all over the world, there are countless guides, tutorials, and resources that can be found online. You can take advantage of WordPress forums where you can communicate with others who use the planet's most popular CMS.

Aside from those options, you can also get help and support directly from the WordPress support team.

If you have a paid WordPress plan, you'll have access to live chat support 24 hours per day, Monday to Friday. For those of you who have business or ecommerce plans, you can even reach live chat agents on the weekends.

3. SEO-friendly

SEO can make or break the success of your website. So it's something that you need to start focusing on from the inception of your site.

WordPress makes this easy by having some built-in tools that tell you how SEO-friendly your content is. Although most of you will want to upgrade from the basic SEO tools and install a WordPress SEO plugin.

4. Flexibility

WordPress can be as in-depth and complex or as simple as you want it to be.

You have the option to just use the basic version of the platform to publish blog posts. Or on the other side of the spectrum, you can use it for your business website and add widgets and plugins to add functionality.

Nearly anything that you want to do with your website can be accomplished with WordPress.

5. Security

In general, WordPress is a safe and secure platform. But it doesn't mean you're completely vulnerable from malicious attacks, hackers, and malware on your website.

Fortunately, WordPress makes it easy for you to enhance your site's security with features like password protection for folder contents.

Keeping your WordPress version up to date will also fight off bugs and potential security threats.

It's also easy to enable an SSL certificate for your WordPress site.

Again, you may need to install a plugin or third-party application for that to happen, but the possibilities are still there.

6. REST API

Most of what we talked about today has been geared toward WordPress beginners. But the platform has plenty of advanced features as well.

Configuration and Installation

Before Install and Requirements on the server side

PHP 7.3 or greater

MySQL 5.6 or MariaDB 10.1 or greater

phpMyAdmin

WordPress 5.4.1

Optional: Email server

Https & SSL

Bootstrap 4.4 version

Basic Instructions

1.Download and unzip the WordPress package if you haven't already.

2.Create a database for WordPress on your web server, as well as a MySQL (or MariaDB) user who has all privileges for accessing and modifying it.

3.(Optional) Find and rename wp-config-sample.php to wp-config.php, then edit the file (see Editing wp-config.php) and add your database information.

Note: If you are not comfortable with renaming files, step 3 is optional and you can skip it as the install program will create the wp-config.php file for you.

4.Upload the WordPress files to the desired location on your web server:

- If you want to integrate WordPress into the root of your domain (e.g. <http://example.com/>), move or upload all contents of the unzipped WordPress directory (excluding the WordPress directory itself) into the root directory of your web server.
- If you want to have your WordPress installation in its own subdirectory on your website (e.g. <http://example.com/blog/>), create the blog directory on your server

and upload the contents of the unzipped WordPress package to the directory via FTP.

Note: If your FTP client has an option to convert file names to lower case, make sure it's disabled.

5.Run the WordPress installation script by accessing the URL in a web browser. This should be the URL where you uploaded the WordPress files.

- If you installed WordPress in the root directory, you should visit:
<http://example.com/>
- If you installed WordPress in its own subdirectory called blog, for example, you should visit: <http://example.com/blog/>

Install Plugins list

On this project, we need some plugins for the booking function Member function and Live Chat function, Strengthen Security function.

BOOKING SYSTEM

Advanced Booking Calendar 1.6.4

- Fully **responsive**, backend and frontend. Check your availabilities on your phone.
- Bookings stored in **your WordPress database**
- Booking will **generate an email** where you can accept or reject bookings
- Guests will receive emails when their **reservation** is generated, confirmed or rejected
- **Easy to manage prices** by seasons and room types
- All reservations are **easy to access and manage** in the backend.
- Change the **minimum number of nights** a guest has to stay for different seasons.

BOOKING CALENDAR

- Calendar **overview** for all your active rooms in your Hotel
- Single **calendar for each room type**
- Create calendars for up to 15 rooms
- Every calendar is responsive and **works great on mobile**

BOOKING FORM

- Responsive form that **searches for matching rooms** by date and guest count
- Inputs can be stored in **Cookies**
- Generates one reservation per booking

ANALYTICS

- Analytic function helps you to identify high seasons
- Find the best pricings for your Hotel

- See how many requests fail and what the average person count is

Member System

Ultimate Member 2.1.5

Ultimate Member is the #1 user profile & membership plugin for WordPress. The plugin makes it a breeze for users to sign-up and become members of your website. The plugin allows you to add beautiful user profiles to your site and is perfect for creating advanced online communities and membership sites. Lightweight and highly extendible, Ultimate Member will enable you to create almost any type of site where users can join and become members with absolute ease.

The screenshot shows the Ultimate Member login interface. At the top, there is a navigation bar with links for "UM Demo", "Activity", "Members", a search bar, and buttons for "Login" and "Register". The main area is titled "Login". It contains fields for "Username or E-mail" and "Password". Below these is a reCAPTCHA field with the text "I'm not a robot" and a checkbox. There is also a "Keep me signed in" checkbox. At the bottom, there are "Login" and "Register" buttons, and a link for "Forgot your password?".

The screenshot shows the 'Ultimate Member - Settings' page. On the left, there's a sidebar with navigation links for Dashboard, Posts, Media, Pages, Comments, Ultimate Member (which is active), Settings (Forms, User Roles, Member Directories, Extensions), Appearance, Plugins, Users, Tools, Settings, WP Sandbox, and a Collapse menu. The main content area has a title 'Ultimate Member - Settings' and a tab bar with 'General' (selected), Access, Email, Appearance, Misc, and Install Info. Below the tabs are links to Pages, Users, Account, and Uploads. A 'Profile Permalink Base' dropdown is set to 'Username'. Under 'User Display Name', it says 'First name & last name'. There are several settings with checkboxes: 'Automatically redirect author page to their profile?' (checked), 'Enable Members Directory?' (checked), 'Use Gravatars?' (unchecked), and 'Require a strong password? (when user resets password only)' (unchecked). A 'Save Changes' button is at the bottom, followed by a note about leaving a review and the version number 'Version 5.0.2'.

Live Chat System

WP-Live Chat 8.1.7

OVERVIEW

Once the live chat plugin is activated, click on “Live Chat” in the left menu navigation. As soon as a visitor lands on your website, their details will be displayed in the live chat control panel. A live chat box will be displayed on their screen. If they fill out their details and click “Start chat”, a ringing sound will trigger in your live chat control panel. Once you accept the chat, you can converse with your visitor.
